

A scatter plot showing the relationship between Amplitude Real (linear) on the x-axis and Amplitude Imag (linear) on the y-axis. The x-axis ranges from 0.0 to 1.0 with major ticks every 0.2. The y-axis ranges from 0.0 to 1.0 with major ticks every 0.2. A dashed red line, labeled 'Ideal' in the legend, represents the ideal linear relationship $y = x$. Several data points are plotted as small circles. Most points are clustered near the origin (0,0) and follow the ideal line. One point is located at approximately (0.35, 0.35), also following the ideal line. There are a few points near the origin that deviate slightly from the ideal line, with one point at approximately (0.0, 0.95) being a notable outlier.
